Top 5 Best Cell Phone Spy Software Reviewed

Hello, welcome to **Best Phone Spy Reviews**. My name is Jack Gillman, I have been in the spy industry for almost 5 years, so I've tried and tested hundreds of different cell phone spy programs over the years.

To help you choose the best phone spy app for your needs, I have put together a list of the best mobile phone spy tools available on the Internet. Take a look at each program below and decide which one is right for you.

Top 5 Phone Spy Software 2014

There is a lot of junk out there, and to help you avoid it, I'm going to go over what I've found to be the best mobile phone spying software available right now. I've factored in things like features, functionality, reliability, and customer feedback to help you make an informed decision.

Important: Every phone spy program listed below is 100% undetectable – the application runs in the background without the user being aware.

#1 – FlexiSPY (*Best Spy Software for iPhone and iPad*)

FlexiSPY is the best smartphone spy software I've tested. FlexiSPY has been in the business of providing cell phone spy software since 2005. It has the most advanced features available to help you spy on mobile cell phone usage, and is available on a wide variety of mobile platforms, including iPhone, iPad, Android, Blackberry, and Nokia Symbian.

I like FlexiSPY so much because it's very easy to use. Within minutes, you can download and install the FlexiSPY spy app to begin recording activities such as: text messages, phone calls, GPS locations, Facebook, Viber, BBM, iMessages, WhatsApp chats, Skype messages, photos and videos, email, websites visited, and more.

But what stands out with FlexiSPY is its Extreme Version. FlexiSPY Extreme adds some more advanced features to the premium version and it gives you even more ability to spy on a cell phone. These features below are what set FlexiSPY Extreme apart from the competition, and display just how powerful this software can be.

- **Call Intercept:** This feature lets you listen in to a live phone call as it happens.
- **Record Phone Calls:** Remotely record all phone calls made to or from the target phone. All call recordings are uploaded to your FlexiSPY control panel.
- **Record Surroundings:** The phone's surroundings are recorded and uploaded to your control panel as mp3s. You can even listen to it live while it is occurring.
- **Spy on Passwords (Password Cracker):** An industry first. This unique feature allows you to see all passwords entered on the phone. You can easily see the actual passwords they use for social messaging, emails and applications.
- **RemCam:** This feature allows you to take control of their phone camera remotely to take pictures which then are uploaded to your account.
- **Instant GPS Locations:** Getting the current GPS location, view the latest locates on a map.
- **Remotely control the phone:** FlexiSPY allows you to make any changes remotely through your online web panel. This is something I haven't seen in other monitoring applications.

With FlexiSPY Extreme you can basically monitor every activity on target phone plus know its whereabouts, social media passwords, and surrounding environment and all under your control. Once you install it on the phone and make changes to some simple settings, the phone starts sending the information across the internet to the FlexiSPY's servers. Then, all you have to do is log in to your control panel area and start looking at the data that provides the truth.

There are more features included with this cell phone spy and monitoring software which is what makes it so powerful. What you won't find with FlexiSPY is the ability to block websites, apps, contacts, and phone

numbers. However, these blocking features may not be important since blocking can give away the stealth characteristic of this type of software.

- Cost: FlexiSPY Premium version – \$149, FlexiSPY Extreme version – \$349 (1-Year License)
- Developer: Flexispy, Ltd.
- Visit their website: <http://www.flexispy.com>

#2 – Highster Mobile (Best Spy Software for Android Phone and Tablet)

Highster Mobile Pro Edition is one of the best value for money mobile spying programs out there. It is packed with features that will help you monitor all aspects of a cell phone, but it does not have as many advanced features as FlexiSPY Extreme. Nonetheless, it has a bunch of features that most users could find useful include the following:

- **Social Media Monitoring:** Monitor WhatsApp, Facebook, Twitter, iMessage, BBM, Skype, Viber, Instagram, and Email.
- **Real-time GPS Tracking:** Know where the device is at all times with GPS-tracking technology. Location is displayed on a map within the control panel.
- **Stealth Camera:** Initiate the phone's camera to take a secret picture that is sent to your account.
- **Call Monitoring:** Monitor incoming and outgoing phone calls, date and time of calls, phone number of person calling or being called, and have a running log of all phone calls made.
- **Photos & Video Log:** View photos & videos taken on the monitored cell phone.
- **Browser History:** View all the websites they visit on their phone.
- **Contacts and Calendar:** View new contacts and calendar entries.
- **Text Message Monitoring:** Monitor and record all SMS text messages. Keeps a running record of all text messages sent and received, and is viewable from within your control panel.

From what I can see, Highster Mobile has taken great efforts to ensure their software works well with all Android devices, is extremely simple and easy to set up, and is glitch-free. On top of that, they've made it their personal mission to make their software affordable for everyone. Although I would have liked to see some of the more advanced features such as Call Intercept or Record Surroundings, Highster Mobile does have just about every feature you're looking for in a cell phone spyware.

For anyone in the market for a low cost spy app for Android, Highster Mobile should be at the top of your list. Plus, once you purchase the software, you get free updates for life.

Highster Mobile supports the major operating systems for smartphones: iOS (iPhone, iPad, iPod) and Android (phone and tablet)

- Cost: Purchase lifetime license for a one-time fee of \$69 (no additional charges! No monthly fees!)
 - Developer: ILF Mobile Apps Corp
 - Visit their website: <http://www.highstermobi.com>
-

#3 – mSpy (Best Parental Control Software for iPhone, Android and Blackberry)

mSpy is another cell phone tracking software product with a long list of features as well as tiered pricing to give you flexibility. It has features that provide you with the basic operations of monitoring calls, spying on text messages, tracking phone locations with GPS, monitoring the calendar, spying on instant messengers, and viewing photos/videos taken on the smartphone.

The mSpy cell phone tracker has some rather unique advantages that you may not find with others. These include:

- 1) Blocking websites and applications:** As a parent, you don't want your kids visiting websites with adult content. Not only is adult content inappropriate for your children but in both cases it is an incredible time waster. With mSpy you can analyze their browsing history, see where they are going, and enter the URLs and applications to block.
- 2) Keylogging capability:** Keylogging is very handy because it can track any message from the monitored cell phone — even those sent from chat apps not supported by mSpy. This feature is only available on Android devices.
- 3) Restrict incoming calls:** One example where incoming call filtering provided by mSpy is useful is if your child is being contacted by a stranger. Furthermore, there may be numbers of friends you know that you don't want communicating with your child.
- 4) Geo-Fencing:** The Geofencing feature lets you find out whenever your children or employees enter or leave a location you have marked as restricted.
- 5) Wi-Fi Networks:** Get more accurate device coordinates by collecting information about each Wi-Fi hotspot the target phone gets connected to.
- 6) 24/7 Customer Support:** I know, other companies offer this as well, but not to the extent that mSpy does. Most companies give you one or two avenues of contact – usually phone and email. mSpy offers you four ways to contact them: phone, email, live chat, or Skype.

mSpy makes it easy for you to try their control panel before you buy a subscription. You can access a demo from their website just by clicking on the link. You will enjoy the control panel that this cell phone tracking system offers. Go to their website and see for yourself.

In my opinion, mSpy is one of the most feature rich spy apps available, but it's also the most expensive. Make sure you NEED all the features before you spend the money.

Here again, you'll find the top 5 smartphone operating systems supported with mSpy: Android, iOS (Apple iPhone/iPad), BlackBerry, Symbian, and Windows Mobile.

- Cost: mSpy comes in three packages (Basic, Premium, and Business) priced from \$40 to \$500
- Developer: Bitex Group LTD
- Visit their website: <http://www.mspy.com>

#4 – iKeyMonitor

iKeyMonitor is a simple but powerful spy application that logs SMS, WhatsApp messages, keystrokes, passwords, websites, screenshots and sends a detailed report to your email. I have tested it on my iPhone 5 with iOS 7.0.4 and it works really well. It should work on Android as well. The interface is clear and easy to use, and it does what it's supposed to do.

Here are some things that make iKeyMonitor unique:

- **Free 3-day trial:** iKeyMonitor offers you a full free trial for 3 days totally risk free, which is great for you to see how the software really works before buying.
- **View every keystroke typed:** Because its primary use is a keylogger, all forms of text messaging will be logged, no matter what app is used. You will receive all content that is exchanged over all text messaging apps.
- **Capture passwords entered:** Every keystroke typed into the keypad of the monitored device is logged—even passwords that are otherwise hidden from the user when typed. You can capture the username and password with iKeyMonitor.
- **Capture screenshots periodically:** Automatically takes a screenshot as the phone screen changes, and can be recorded as often as you like. This gives you the ability to see what web sites have been visited, or what apps have been used.

- **Multi-language support:** iKeyMonitor is designed to support multi-languages, such as English, Spanish, French, German, Russian, Portuguese, Italian, and much more. This setting can be found in the administrator interface. Other settings can also be set through this interface, including storage parameters, password for iKeyMonitor, FTP, security options, and more.

If you are looking for a software to monitor activity that takes place on a phone, then you will want iKeyMonitor. It is the best keylogging app available for iPhone and Android. iKeyMonitor provides a variety of features to meet your monitoring needs. This is not just a keylogger app, it is also an advanced cell phone monitoring software.

Installation is simple and the app is compatible with iOS and Android platforms. Unless the users are told that there is a keylogger in place, they will never know, thanks to the software's stealth mode that is untraceable.

- Cost: Free to try; \$29.95 (1 month license); \$99.95 (1-year license)
- Developer: Awosoft Technology CO, LTD
- Visit their website: <http://ikeymonitor.com>

#5 – PhoneSheriff

PhoneSheriff is a great cell phone monitoring and tracking software that lets you monitor ALL the activities of any iPhone, Blackberry, Android phone and tablets including iPad and iPad mini. The application is super easy to install on the device you want to monitor. It has all of the usual features found in this type of software such as call logging, GPS location tracking, reading of SMS and email messages, viewing browser history, and logging of photos/videos taken.

There are also some additional features that you may find useful:

- **Social network monitoring:** View incoming and outgoing chat messages from within social networking apps, like Facebook, WhatsApp, Viber, BBM, and iMessage.
- **Create time restrictions:** During certain times of the day (based on your specifications) you can block full access to the device, or block all phone calls.
- **Geo-Fencing Alert:** Be alerted anytime the target device travels outside of a specific area you've designated on the map via your control panel.
- **Profanity Alert:** Set up keyword filters that alert you whenever a vulgar word (that you define) is input into the device.

- **Block services:** Block access to specific apps, websites, contacts and more. Restrict/Block messaging and calling services for specific contacts. Add numbers to whitelist and blacklist to allow and block them respectively.

There are many more features available with PhoneSheriff. It is well worth the subscription fee. Installation on the target device is easy and clean, and there is a robust set of configuration options available on the PhoneSheriff control panel.

If you're looking for a professional cell phone monitoring software that will help you protect your family or business, I think PhoneSheriff might just be the solution you've been searching for.

- **Cost:** PhoneSheriff offers monitoring plans starting as low as \$49/six months for families and \$299/year for businesses. The business option comes with 5 licenses, which allows you to track 5 separate devices.
- **Developer:** Retina-X Studios, LLC
- **Visit their website:** <http://www.phonesheriff.com>

What You Need to Know Before You Buy

1. You must have access to the target phone (the device you want to track). You have to be able to download the mobile spy software onto the device you want to track, and you don't need to download anything on your phone or computer. Therefore, you need physical access to the device.

2. You must have internet access. You cannot track the device's activity if you do not have internet access. Activity from the device is stored on the spy software company's servers, where you can access it online via your control panel.

3. Make sure the spy software is compatible with your operating system. This shouldn't be a problem for most devices. Most software companies today offer software compatible with the major operating systems – iOS, Android, Blackberry, and Symbian. Remember that an iOS device must be jailbroken before the software can be installed.

4. Make sure the company has a support center. Software issues can and will most likely occur during the time you're using the spy software. This is due to the devices updating their operating system, and the spy software needing to be updated to adapt. When a technical issue occurs, you may need to contact support. Make sure the company you buy the software from has a reputed support center – preferably 24/7 support via live chat or phone.

5. Beware of claims that sound too good to be true. Yes, the scammers are present in the cell phone spy software market, and they're willing to make some very bold (and FALSE) claims to get you to buy. My best piece of advice is if it either sounds too good to be true, or is a feature you haven't seen advertise before, be very cautious of dealing with that particular company. Stick with my top cell phone spy software recommendations above, based on my experience, these companies are the "cream of the crop", and they all work as promised.

How To Get Started

You will first purchase the software from a reputable company. Once purchased, you will receive an email from the vendor that will include your login information, installation instructions, download link and activation code.

Next, you will install the software onto the device you would like to track. Most cell spy software today is compatible with all mobile device platforms: iOS (iPhone/iPad), Android, Blackberry, and Symbian. Once the software is installed, you can then start tracking any activity on the phone from a control panel you can access from any device. It really is that simple.

Special note: If you want to use the software on an iPhone, you will first need to jailbreak the iPhone before you can install it.

My Final Words about the Best Phone Spy Software: pick a phone spy app you can trust

So if you're looking for a high quality mobile phone spyware that can provide the results that you want and has a 24/7 technical support team that can be reached via live chat, then check out FlexiSPY. But if you want the top of the line, most powerful cell phone monitoring software on the market, go with mSpy or FlexiSPY Extreme (but you'll have to pay more for it). Highster Mobile is by far the best VALUE for the money, it doesn't have all the advanced features as FlexiSPY, but it does have all the features that you would need on this cell phone spy software.

These 5 products are designed to provide you with the information that you need when you suspect your child, employee, or spouse is up to no good and hiding something from you. Find out more about each and make an informed purchase decision.

Thank you for visiting my website and I hope you find what you are looking for. If you have any questions or need any help please [contact me](#).
